

## TOOLS TO SAVE ON ENERGY COSTS.

THAT'S MORE COOPERATIVE.

DFA Energy has partnered with EnSave, a leading agricultural energy efficiency consulting firm, to provide DFA members with reduced cost energy audits and other energy efficiency opportunities.

An energy audit from DFA Energy can uncover new energy efficiencies and identify energy savings that improve your bottom line. Members who have participated in our energy audits save on average 10–35 percent on their energy bills.

### **An energy audit reviews several aspects of your operation including:**

- **Lighting systems**
  - **Did you know:** compact fluorescent lamps provide as much light as incandescent bulbs while using less electricity?
- **Milk cooling**
  - **Did you know:** cooling equipment such as a pre-cooler can save an operation on cooling costs and improve milk quality?
- **Milk operating equipment**
  - **Did you know:** dairy operations can improve efficiencies while saving energy when milking equipment works in conjunction with a variable speed drive and plate cooler?
  - **Did you know:** dairy operations can further reduce their energy costs by replacing outdated reciprocating compressors with scroll compressors?

**If you want to learn more about on-farm energy efficiency and production, or to schedule an energy audit, contact George Harper at 816-801-6146, email [geharper@dfamilk.com](mailto:geharper@dfamilk.com) or visit [www.dfaenergy.com](http://www.dfaenergy.com).**
